Motor Brake Relay

Type SX 9033N 230V ministop

New!! with single pot adjustment

Model SX 9033N

Special Note

When monitoring the injected DC current we recommend the use of a true RMS or moving iron instrument to limit the injected current to no more than 2.8 x the motor rated current or 25A which ever is achieved first, as low reading errors will occur with other types of instrument.

Description

A compact IP65 screw mounted motor brake combination, designed for DOL single phase motors.

SX 9033N 230V is suitable for motors rated from 200W to 2kW. Braking current (IB) is adjustable via a potentiometer scaled 10-100% (2.5A to 25A). Indication is via three LEDS' which indicate power connected (green), fault indication (red) and DC current injection (yellow).

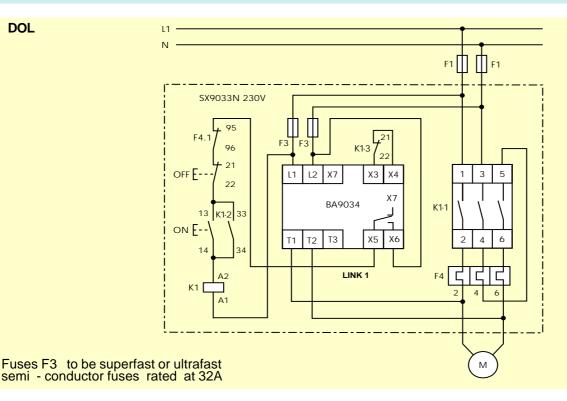

The brake module incorporates standstill monitoring with an internal contactor connecting the DC output of the brake relay to the motor.

The inter-lock contact X5 –X6 is utilised to avoid motor restart while injecting braking current and a built in safety brake override timer will stop the braking cycle if standstill is not detected within the safety

Braking is normally initiated by a close - open - close Volt free contact sequence at terminals X3-X4,

Application Circuit Diagram

Braking Current Setting

Connect power to 1 & 3, (green LED on), set current pot (IB) to min (anti clockwise) and Initiate a braking cycle via X3 - X4, (yellow LED (IB) on), slowly turn up the current pot until the motor starts to brake, then turn pot up further to a maximum of no more than 2.8 or 2 x the motor line current measured at terminal T2. Restart the motor and re initiate a braking cycle, if neccessary re adjust untill the desired stopping time is achieved. The yellow LED (IB) should turn off 1 -1.5sec after motor standstill has been detected. If standstill monitoring is not detected either adjust stopping time to 7 to 9 sec and the safety timer will then turn off the brake current after 11sec or contact Dold Industries for further application advice. If the red LED (Error) flashes and contacts X5-X6 remain open, the unit has detected a fault, please see fault diagnosis overleaf. The red LED should not illuminate under normal operation, the fault can be reset by removing power to the starter

Wiring Information

Connect wiring for L1, N to terminals L1 (1), L2 (3) on the starter contactor K1. The motor should be connected to terminals T1(2), T2 (6) on the starter overload F4.

NB: T3 not connected for single phase applications

If a remote E- Stop button is required, remove link"1" fitted between terminal "X5" on BA9034N and terminal "95" on the overload. Wire the N/C contact of the remote E -Stop button across these

All wiring to be 2.5 mm² min, Conduit or gland entry, 20 mm or 25 mm.

Warning: Please ensure this starter is only installed and adjusted by electrically qualified personnel and the wiring to the starter and associated fusing is correct for the rated motor current.

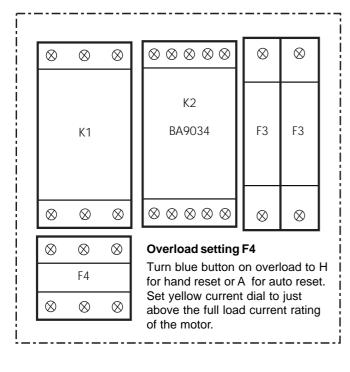

Diag 1

Motor Brake Relay

Type SX 9033N 230V ministop

Layout

Indication

Green LED, (Run)
Yellow, LED, (IB)
Red LED, (Error)

(On) Power connected
(On) DC injection braking
(Off) System healthy

Red LED, (Error) (On Flashing) System fault.

Flashing x 1 pulse Incorrect mains frequency.

Contact manufacturer for advice.

Flashing x 2 pulses Set brake current is not achieved.

Brake current circuit broken. Motor winding resistance too high. Repair circuit or reduce braking current and allow longer braking time.

Flashing x 3 pulses Overtemperature of brake unit.

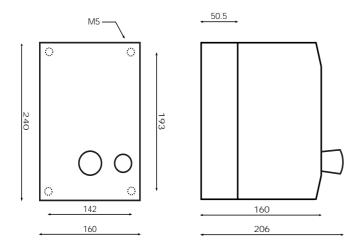

Duty cycle exceeded. Reduce braking cycle time. Increase cooling in enclosure.

Flashing x 4 or 5 pulses System error

Return to manufacturer.

To reset Error fault (X5 - X6 open), cycle power to starter.

Dimensions

Specifications

Nominal Voltage 230Vac
Voltage Tolerance 0.9 – 1.1Vn
Frequency 50Hz +/- 1Hz
Braking Current (IB) 2.5 – 25A (10 -100%)

Starter DOL kW Rating @ 230V 2 kW

Braking Voltage (230V) 10 – 190V dc @ T1 - T2

Safety Time Delay 11sec max Reaction Time 0.2 to 2 sec

motor back EMF dependant >2 sec for standstill detection

Minimum on time >2 sec f Standstill detection range 5-25A

Stops Per Hour @ 25A 60 / Hr @ 5 sec duration

Control Contact Ratings 400V (AC1) 3A Semiconductor rating 1250 A²/s

Temperature Range 0 - +45°C

Protection Class Case IP40 Tern

Protection Class Case IP40 Terminals IP20
Enclosure Material Thermoplastic Vo rating UL94

Terminations 2 x 2.5mm² solid

2 x 1.5mm2 stranded ferruled

WARNING !!

Please ensure this product is only installed and adjusted by electrically qualified personnel and the wiring to the unit and associated fusing is correct for the rated motor current.

If in any doubt please contact Dold Industries Itd.

kW / Current Overload Options

Motor kW Rating @ 230V Amps

1.5 - 2 kW 6 - 10A

Information Required With Order

• Model type • Motor supply Voltage • kW • O/L current Example: Motor Brake Relay, SX 9033N, 230V, 2kW, 6-10A
